

Power Injectable Infusion Port

## ORDERING INFORMATION

### STANDARD Pro-Fuse® CT Implantable Port

(5/BOX)	Attachable Catheter	Pre-Attached Catheter
8.0FR Trinflex® Catheter	MRCTT80001	MRCTT80801
9.6FR Silicone Catheter	MRCTT96001	MRCTT96801

### LOW PROFILE Pro-Fuse® CT Implantable Port

(5/BOX)	Attachable Catheter	Pre-Attached Catheter
6.6FR Trinflex® Catheter	MRCTT66041	MRCTT66841
8.0FR Trinflex® Catheter	MRCTT80041	MRCTT80841

#### Sets Contain:

- (1) CT Implantable Port
- (1) Catheter
- (2) Catheter Locks
- (1) Scalpel
- (1) 18Ga. Introducer Needle
- (1) Vein Pick
- (1) .038" x 70cm "J" Marked Guidewire with Advancer
- (1) 10cc Syringe
- (1) Valved Tearaway Introducer
- (1) Tunneler
- (1) 22Ga. Huber Needle
- (1) Blunt Tip Needle
- (1) Valved Tearaway Introducer IFU
- (1) Port IFU
- (1) Patient Information Pack
- (1) Patient Chart Sticker

Powerful Platform  
for Infusion &  
Interventional Therapies.

medcompnet.com/pro-fuse

The Medcomp Pro-Fuse<sup>®</sup> CT Ports have been helping practitioners deliver the highest level of diagnosis and treatment to patients since their inception. The Pro-Fuse<sup>®</sup> CT Ports are constructed of a MRI-compatible, lightweight engineering plastic that allows for up to 5cc/sec power injection of contrast media for Contrast-Enhanced Computed Tomography (CECT) scans. Medcomp is now introducing a low profile power injectable port configuration that will help increase patient comfort and ease of insertion to its existing innovative port line.

**Stability:**  
Broad flat base with multiple suture hole locations increase port stability and dramatically reduce the potential for flipping.

**Location:**  
The raised rim of the Pro-Fuse<sup>®</sup> CT device provides a clear tactile response during palpation to assist in septum location for infusion therapy.

**Size:** The new low profile port configurations make it easier to select a port suitable to a patient's body type, resulting in improved aesthetics and patient comfort while still maintaining the highest level of performance. All port sizes maintain a high septum to port body size ratio to promote ease of access and prevent inaccurate sticks.

CT printed in reverse on port base.

**CT Identification:**  
Utilizing a unique printing technique, "CT" can be visualized under x-ray, to provide recognition of the power injectability of the Pro-Fuse<sup>®</sup> CT device. All patients with the Pro-Fuse<sup>®</sup> CT receive a patient packet, which includes additional identification tools.

**Materials:** Composed of a chemically resistant plastic and titanium, attached to Trinflex<sup>®</sup> or Silicone catheters. Pro-Fuse<sup>®</sup> CT ports are compatible with virtually all infusing agents including chemotherapy treatments.

Implantable Port

**Connection:**

Clear locking mechanisms provide multiple sensory confirmations, through audible, tactile, and visual responses. All three features afford added security for the healthcare professional to ensure proper securement of the catheter to the port base.
